

The Living Wall of Willows

[PG07F23] Josef Scholbeck & Anthony Biglieri

Established in Germany in 1990, these living walls have become a leader in environmental noise reduction barriers in Europe. Living walls are constructed from live willows based on the old craft of weaving wicket fences. These low-maintenance fences provide privacy screening and natural sound barriers for urban and rural environments.

Learn how to construct these walls along with their maintenance and care and enjoy their benefit all year long.

Wednesday, October 17, 7 to 9:30 p.m.
Public \$35 / Members \$30
